

A close-up photograph of a chimpanzee's face and hands. The chimpanzee is holding a nut in its right hand and using its left hand to peel it. The background is a blurred natural setting with green foliage and brown earth. The text is overlaid on the image in white.

Chimpanzees

Chimpanzees use different types of material to do nut cracking. Her mum teaches her to do this, it's a skill that has been practiced for several thousands of years by chimps. She will grow up and teach her own chimps this way to get to her food

Fish

One family of fish as evolved into around 15000 different species. The big fish protect them by putting all of the little fish in to its mouth, also does it to the eggs on the floor to protect them. It takes 3 weeks for the mums eggs to come out she doesn't eat through that whole time.

Cheetahs

Cheetahs are the softest wildlife cats, 2 sets of brothers and the leader cheetah have been hunting for 3 years together. They're strong enough to hold off a lion

Brown hyena

- When they're 4 months old they need solid food and in the desert there isn't any so their mum has to go search for some and leave them for several days. Temperatures reach up to 50 degrees.

Elephants

Elephants have used their intelligence to survive out in the heat. When food is 6m or more up elephants are out of reach from it, a big elephant needs to eat up to 90kg of vegetation everyday
